Dear Hiring Manager,

My name is Zeja Cai (James) and I would like to express my enthusiasm for the Software Engineer - Data Communication position within Huawei that's posted on LinkedIn. I, myself, have been a Huawei fan since 2013, after I had my first Huawei phone. I have been learning about your company and I am impressed by the company culture and commitments that your company has made to collaboration, innovation and quality. My passion for these principles aligns perfectly with your company's vision. I have proven my ability to accomplish hands-on tasks and solve unfamiliar problems, and I would be thrilled to use these skills to help the company.

During my research project at SFU, I designed and implemented a software tool for enhancing 3D models with human-interactive components, which honed my problem-solving and time management abilities, and allowed me to adapt rapidly to new technologies. This research project comprises engineering concepts, 3D models, C#, and RhinoCeros, which I had never learnt in my courses. However, I managed to learn all the unfamiliar concepts and finished the project in just 6 months while I was taking another four courses. Since the software tool is open sourced, therefore, I have ensured it is clean and maintainable, with comprehensive software documentation, as I typically do. During the project, my role required significant collaboration with a multidisciplinary team that defined requirements, design solutions and test functionality throughout the whole project, which prepared me to work effectively in GeologicAI's collaborative and innovative environment.

In addition to my research project experience, I have experience working with implementing software applications using C/C++, C#, Python, Java and Kotlin. For example, I have learnt data structure in C++ and implemented a path finding software tool as the final course project. This software comprised three pathfinding methods leveraging multiple self-implemented data structure classes in C++. I also have a strong knowledge of database administration, database installation and security. For example, recently I have implemented the backend of a website as my final project on my Distributed System course. The backend services are designed to manage data in their databases and perform tasks. Moreover, I also deployed these databases on the cloud.

Additionally, my experience with version control systems like Git, along with my strong communication and problem solving skills will allow me to make significant contributions to your team. As a person who experiences many different cultures, I hope my experience can help Huawei to make more innovative products to connect the world. I would enjoy discussing with you more about my qualifications for this position. Thank you for your consideration and I am looking forward to hearing from you soon.

Sincerely,

Zeja Cai
